When faced with danger, some animals pretend to be dead. This type of adaption is known as thanatosis. Trickery. Trickery can also be used ...

Defense Mechanisms Animals Use to Survive
The animal signals to predators that it is unpleasant to eat. Warning sounds: Sometimes the same principle occurs with senses other than sight. Warning sounds allow the animal to stay hidden. Rattlesnakes are a good example: they need crypsis to avoid alerting their prey, and use the rattle to avoid being accidentally injured by large animals.

A Closer Read for Main Ideas: Animal Behavior: Animal ...
Many weakly-defended animals, including moths, butterflies, mantises, phasmids, and cephalopods such as octopuses, make use of patterns of threatening or startling behaviour, such as suddenly displaying conspicuous eyespots, so as to scare off or momentarily distract a predator, thus giving the prey animal an opportunity to escape. In the absence of toxins or other defences, this is essentially bluffing, in contrast to aposematism which involves honest signals.

Anti-predator adaptation - Wikipedia
Many animals exhibit innate patterns of protective behavior in response to threats in their environment from predators etc.

Animal defensive behavior | Psychology Wiki | Fandom
