The Differential Calculus splits up an area into small parts to calculate the rate of change. The Integral calculus joins small parts to calculates the area or volume and in short, is the method of reasoning or calculation. In this page, you can see a list of Calculus Formulas such as integral formula, derivative formula, limits formula etc.

Differential and Integral Calculus, Volume 1 (2nd ed.)
Integral calculus, Branch of calculus concerned with the theory and applications of integrals. While differential calculus focuses on rates of change, such as slopes of tangent lines and velocities, integral calculus deals with total size or value, such as lengths, areas, and volumes.

Calculus. The word Calculus comes from Latin meaning "small stone", Because it is like understanding something by looking at small pieces. Differential Calculus cuts something into small pieces to find how it changes. Integral Calculus joins (integrates) the small pieces together to find how much there is.
