The Princeton Guide to Ecology is a concise, authoritative one-volume reference to the field's major subjects and key concepts. Edited by eminent ecologist Simon Levin, with contributions from an international team of leading ecologists, the book contains more than ninety clear, accurate, and up-to-date articles on the most important topics within seven major areas: autecology, population ecology, communities and ecosystems, landscapes and the biosphere, conservation biology, ecosystem services, and biosphere management. Complete with more than 200 illustrations (including sixteen pages in color), a glossary of key terms, a chronology of milestones in the field, suggestions for further reading on each topic, and an index, this is an essential volume for undergraduate and graduate students, research ecologists, scientists in related fields, policymakers, and anyone else with a serious interest in ecology. Explains key topics in one concise and authoritative volume Features more than ninety articles written by an international team of leading ecologists Contains more than 200 illustrations, including sixteen pages in color Includes glossary, chronology, suggestions for further reading, and index Covers autecology, population ecology, communities and ecosystems, landscapes and the biosphere, conservation biology, ecosystem services, and biosphere management

Produced for unit SBB241 (Ecology) offered by the Faculty of Science and Technology in Deakin University's Open Campus Program.

Learn about the most important aspects of ecology without having to carry around huge books. This study guide has been brilliantly designed into categories for better review and understanding of the many concepts of ecology. You can use this guide for reviews and even to study in advance. This is a very valuable resource so don't forget to grab a copy today.

Produced principally for unit SBB227 (Principles of ecology) offered by the Faculty of Science and Technology's School of Biological and Chemical Sciences in Deakin University's Open Campus Program.

How do religion and the natural world interact with one another? Grounding Religion introduces students to the growing field of religion and ecology, exploring a series of questions about how the religious world influences and is influenced by ecological systems. Grounding Religion examines the central concepts of ' religion ' and ' ecology ' using analysis, dialogical exchanges by established scholars in the field, and case studies. The first textbook to encourage critical thinking about the relationships between the environment and religious beliefs and practices, it also provides an expansive overview of the academic field of religion and ecology as it has emerged in the past forty years. The contributors introduce students to new ways of thinking about environmental degradation and the responses of religious people. Each chapter brings a new perspective on key concepts such as sustainability, animals, gender, economics, environmental justice, globalization and place. Discussion questions and contemporary case studies focusing on topics such as Muslim farmers in the US and Appalachian environmental struggles help students apply the perspective to current events, other media, and their own interests.
