With these improvements, a new name for a truly engineered solution was warranted: restricted access barrier system (RABS). In the early 1990s, industry leaders worked within ISPE to establish a new platform for end users to discuss isolators and advocate for their adoption, which resulted in the formation of the ISPE Barrier Isolator Conference (now the ISPE Aseptic Conference).

RABS: Definitions and Performance Levels. Barrier technology has long been established in the pharmaceutical industry; barriers have ranged from simple screens or demarcation, through RABS (Restricted Access Barrier Systems) to full physical barriers in the form of isolators. Advances in isolator technology have been significant and they are now better specified than ever.

RABS: Definitions and Performance Levels

Restricted Access Barrier Systems (RABS) and isolator systems are two methods of Advanced Aseptic Processing (AAP) that ensure an improved processing environment for cleanroom operations. Knowing some of the key mechanical and operational areas in which the two systems differ will increase awareness of the systems in the industry, and will help create a more detailed definition of each.
