First in the YA bestselling fantasy trilogy of the battle between Light and Dark. “If you loved the Twilight series, you will love this book.”—Giuliana Rancic, E! News anchor Caroline Ellis’ sixteenth birthday sets into motion a series of events that have been fated for centuries. A descendant of Virginia Dare, the first child born in the lost colony of Roanoke, and unaware of her birthright as the heir to the throne of the Light Fae, it isn’t until Caroline begins a tumultuous relationship with Devilyn Reilly that the truth of her heritage is revealed. Devilyn is the only Fae who is both of the Light and of the Dark, and struggles to maintain that precarious balance to avoid succumbing to the power of the Dark within him. He is the only one who can save Caroline from those who would destroy her and destroy all hope for unity among the Fae. He promises Caroline that he will protect her at all costs, even when it means protecting her from himself. Told from the alternating perspectives of Caroline and Devilyn, Fae draws on mysteries, myths and legends to create a world, and a romance, dangerously poised between Light and Dark. Praise for the Fae trilogy “A phenomenal series.”—Margaret Stohl, #1 New York Times bestselling coauthor of Jo & Laurie “Lovers you must buy a copy!”—Nicky Whelan, actress, Hall Pass, Franklin & Bash “Since the Twilight series recently came to an end, the search for the next hit teen novel is on. Fortunately, with C.J. Abedi’s first book in the Fae series, there may be no need to look any further.”—Firstoknow.com

This is the origin story of technology super heroes: the creators and founders of ARM, the company that is responsible for the processors found inside 95% of the world’s mobile devices today. This is also the evolution story of how three companies - Apple, Samsung, and Qualcomm - put ARM technology in the hands of billions of people through smartphones, tablets, music players, and more. It was anything but a straight line from idea to success for ARM. The story starts with the triumph of BBC Micro engineers Steve Furber and Sophie Wilson, who make the audacious decision to design their own microprocessor - and it works the first time. The question becomes, how to sell it? Part I follows ARM as its founders launch their own company, select a new leader, a new strategy, and find themselves partnered with Apple, TI, Nokia, and other companies just as digital technology starts to unleash mobile devices. ARM grows rapidly, even as other semiconductor firms struggle in the dot com meltdown, and establishes itself as a standard for embedded RISC processors. Apple aficionados will find the opening of Part II of interest the moment Steve Jobs returns and changes the direction toward fulfilling consumer dreams. Samsung devotees will see how that firm evolved from its earliest days in consumer electronics and semiconductors through a philosophical shift to innovation. Qualcomm followers will learn much of their history as it plays out from satellite communications to development of a mobile phone standard and emergence as a leading fabless semiconductor company. If ARM could be summarized in one word, it would be "collaboration." Throughout this story, from Foreword to Epilogue, efforts to develop an ecosystem are highlighted. Familiar names such as Google, Intel, Mediatek, Microsoft, Motorola, TSMC, and others are interwoven throughout. The evolution of ARM’s first 25 years as a company wraps up with a shift to its next strategy: the Internet of Things, the ultimate connector for people and devices. Research for this story is extensive, simplifying a complex mobile industry timeline and uncovering critical points where ARM and other companies made fateful and sometimes surprising decisions. Rare photos, summary diagrams and tables, and unique perspectives from insiders add insight to this important telling of technology history.
