Multidimensional Poverty Measurement & Analysis

Multidimensional Poverty Indices typically use the household as their unit of analysis, though this is not an absolute requirement. A household is deprived for a given indicator if they fail to satisfy a given 'cutoff'. A household is assigned a 'deprivation score' determined by the number of indicators they are deprived in and the 'weights' assigned to those indicators. Each dimension is typically given an equal weighting, and each indicator within the dimension is also typically weighted equal
