The analysis of survival experiments is complicated by issues of censoring and truncation. The use of counting process methodology has allowed for substantial advances in the statistical theory to account for censoring and truncation in survival experiments. This book makes these complex techniques accessible to applied researchers without the advanced mathematical background. The authors ...

Survival Analysis Klein And Moeschberger  
Survival analysis is a collection of statistical techniques for the analysis of data on "time-to-event" as a response variable and its relationships to other explanatory variables. The notion of "event" depends on the context and the applications. The event in question may be dealt as may happen in a biomedical context or churning in a business context or machine failure in an ...
